

# TELL ME: WHY SHOULD I PAY TWICE THE PRICE FOR A NEW PLATING TOOL?

Solstice S8 for cassette-to-cassette automated plating

**CLASSONE SOLSTICE –  
IT DOES EVERYTHING I NEED  
FOR HALF THE BIG GUYS' PRICE!**

## Finally, advanced plating for the rest of us...

We all know the Big Guys focus on selling expensive, bleeding-edge tools to the largest users. What about the rest of us who still need to get the job done right within a reasonable budget? ClassOne has great solutions at half the price.

ClassOne's Solstice™ plating tools are designed specifically for users who run 200mm or smaller wafers – but still need advanced performance on substrates like silicon, glass, SiC, GaAs and sapphire. With options for single or multiple metals on the same tool, Solstice is the smart choice for technologies such as TSV, WLP, MEMS or RF.

## Quality plus performance – without the big price tag

Solstice quality begins inside, using top brand components throughout, like Gemu valves, Levitronix pumps and Genmark robots. Solstice is designed and built by industry veterans with literally hundreds of years of combined experience. So the focus is always on consistent superior performance. Such as uniformities of  $\leq 3\%$  on films from thick to thin!

Solstice LT for plating development

## Solstice is taking off!

It started last SEMICON West when our first Solstice was literally sold off the show floor! And ever since, there's been a non-stop stream of requests for demos, with orders now coming in as fast as we can manufacture.

So, call now to set up a demo and see this Solstice phenomenon for yourself. It truly is "advanced plating for the rest of us!" Call: (406) 755-2200. Or email: [info@classone.com](mailto:info@classone.com).
